

The screenshot shows the AWS CloudShell interface in a web browser. The browser tabs include 'Sent Mail - ap0687@srmstedu...', 'AWS CloudShell', 'Upload files - avipsha131/DCN', and 'Untitled document - Google Doc'. The address bar shows the URL: `ap-south-1.console.aws.amazon.com/cloudshell/home?region=ap-south-1#4982206e-48aa-43d3-88d9-af948d7dbf9b`. The AWS CloudShell header shows the region 'ap-south-1' and the user 'Avipsha @ 0334-1098-7930'. The terminal window displays the help text for the 'aws' command:

```
aws() AWS()

NAME
aws -

DESCRIPTION
The AWS Command Line InterFace is a unified tool to manage your AWS
services.

SYNOPSIS
aws [options] <command> <subcommand> [parameters]

Use aws command help for information on a specific command. Use aws
help topics to view a list of available help topics. The synopsis for
each command shows its parameters and their usage. Optional parameters
are shown in square brackets.

GLOBAL OPTIONS
--debug (boolean)
    Turn on debug logging.
--endpoint-url (string)
    Override command's default URL with the given URL.
--no-verify-ssl (boolean)
    By default, the AWS CLI uses SSL when communicating with AWS services.
    For each SSL connection, the AWS CLI will verify SSL certificates. This
```

The bottom of the screenshot shows the Windows taskbar with the search bar, task view, and various application icons. The system tray shows the date and time as 10:40 on 19-09-2022.
